

# Nexius Data Sets: Private Credit

## THE CHALLENGE

Private credit markets lack consistent, borrower-level data that can be confidently used for underwriting, pricing, risk management, and portfolio oversight. Data is fragmented across managers and systems, difficult to standardize, and often constrained by unclear usage rights. As a result, market participants struggle to benchmark credit quality, monitor covenant compliance efficiently, and apply advanced analytics without heavy internal data engineering effort.

## THE SOLUTION

- **Decision-grade private credit data at scale**, with anonymized, rights-cleared coverage across 75,000 loans and 50,000 borrowers, spanning 200+ standardized KPIs.
- **Comprehensive domain coverage** across assets and deals, facilities, covenants, companies, and trades—structured to reflect how credit decisions are actually made.
- **Continuously refreshed and mastered** on the Nexius Data Platform, ensuring accuracy, consistency, and readiness for integration into credit, risk, pricing, and valuation workflows.
- **Built for benchmarking and analytics**, enabling peer comparisons, improved scoring and reserve models, early detection of covenant and credit issues, and more efficient underwriting and portfolio monitoring.
